16th EUROPEAN CONGRESS
ON **BIOTECHNOLOGY**
13-16 July 2014 • EICC • Edinburgh • Scotland
Organised by The European Federation of Biotechnology

www.ecb16.com

The EFB would like to thank all participants, members of the local organising committee and the scientific programme committee, exhibitors, sponsors and partners for their support. We hope to see you all at our next ECB to be held in Krakow, Poland, from the **3rd to 6th July 2016**.

For preliminary information on the congress, please [click here](#).

Memorandum of Understanding with the Asian Federation of Biotechnology (AFoB)

The AFoB and the EFB have signed a Memorandum of Understanding during the ECB16 congress. The two Federations will promote each other's activities on our websites, and hope to collaborate in the organisation of future joint activities.

A total of around 200 delegates from China, South Korea and Taiwan registered for ECB16.

EFB Events

Post-Translational Modifications in Bacteria

organised by EFB Functional Genomics Section

September 9-10 2014

Göttingen - Germany

The 16th International Biotechnology Symposium and Exhibition (16th IBS, IBS2014)

co-organised by EFB Environmental Biotechnology Section

September 14-19 2014

Fortaleza, Ceara - Brazil

[4th International Conference on](#)

[Novel Enzymes](#)

organised by EFB Applied Biocatalysis Section - ESAB

October 4-17 2014

Ghent - Belgium

[Focus on Frontiers in Industrial Biotechnology](#)

organised by EFB Bioengineering and Bioprocessing Section EBBS

November 17-19 2014

London - UK

[Bacterial electron transfer processes and their regulation - 2015](#)

organised by EFB Microbial Physiology Section

March 15-18 2015

Maceira (Torres Vedras) - Portugal

[Recombinant Protein Production 8](#)

organised by EFB Microbial Physiology Section

22-24 April 2015

Mallorca-Spain

[6th International Conference On Analysis Of Microbial Cells At The Single Cell Level](#)

organised by EFB Microbial Physiology Section

July 19-22 2015

Retz-Austria

[12th Biotrans - 2015](#)

endorsed by EFB Applied Biocatalysis Section - ESAB

July 26-30 2015

Vienna - Austria

[Microbial Stress: From Molecules To Systems - 2015](#)

organised by EFB Microbial Physiology Section

November 2015

Sitges - Spain

[3rd meeting on Applied Synthetic Biology in Europe](#)

organised by EFB Microbial Physiology Section

Early 2016

More information soon...

[EFB Institutional Member's Events](#)

[Green Chemistry for Pharma](#)

organised by ACIB - Austria

September 23-24 2014

Graz - Austria

[Translational Biocatalysis](#)

organised by Royal Society of Chemistry - UK

December 16 2014

[New Biotechnology - Special Issue: Abstracts of the 16th European Congress on Biotechnology](#)

This special issue of New Biotechnology will be based on presentations at ECB16 that covered all colours of biotechnology, bringing together the latest developments in biotechnology.

We would like to share with you all this knowledge, so please visit the website of the EFB journal, New Biotechnology, in order to get access to **All** the abstracts of the 16th European Congress on Biotechnology.

[Upcoming Events](#)

[Focus on Frontiers in Industrial Biotechnology](#)

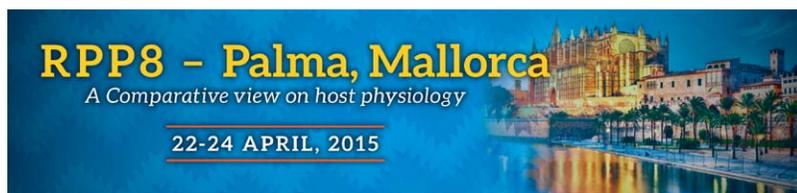

The new **EFB Section on Bioengineering and Bioprocessing** is organising the meeting **Focus on Frontiers in Industrial Biotechnology**. The aim is to encourage collaborative links to be built throughout Europe for joint research and applications to trans-European funding schemes such as Horizon 2020.

From proteins to small molecules, biopharmaceuticals to platform chemicals and biofuels, the meeting will encompass all areas of Industrial Biotechnology and Bioprocessing and will reinforce the links between processes that generate diverse products.

[8th Conference on Recombinant Protein Production - RPP8](#)

The **EFB Section on Microbial Physiology** is organising the 8th conference on Recombinant Protein Production (RPP8). RPP8 is focused on the comparative view of problems and solutions related to recombinant protein production across different hosts, with special emphasis on comparative physiology among microbial and higher eukaryotic platforms. The meeting will focus on four major topics and emerging trends in recombinant protein production of industrial relevance: cell engineering for recombinant protein production in the era of synthetic biology and systems metabolic engineering; protein folding, trafficking and secretion; host physiology under bioprocess conditions; biofabrication of complex protein structures.

Translational Biocatalysis

The Royal Society of Chemistry - Biotechnology Group, the Royal Society of Chemistry - Chemistry Biology Interface Division, and the BBSRC, would each like to invite you to participate in this exciting one-day symposium.

The purpose of the meeting is to highlight recent achievements and to identify future challenges and current trends in the industrial biotechnology sector. The focus will be on the discovery and modification of novel enzymes for biocatalysis, with potential use in industrial processes. As will be seen, analytical and process engineering, synthetic biology, genetics, biochemistry, microbiology, and not least chemistry, are being harnessed to deliver new biocatalytic routes to the synthesis of high-value chemicals.
